

Botox® & Dysport®

What is botulinum toxin Dysport® or Botox®?

Botulinum toxin has been used for over 30 years and is a type of purified protein. It is very safe and is injected directly into facial muscles in very tiny amounts during treatment.

How does it work?

Botulinum toxin works by reducing muscle activity where we have injected. This makes the muscles that cause wrinkles less active and therefore softens as smooths the appearance of the skin.

How many treatments will I need?

In most cases patients can see a real difference after one treatment. This is because botulinum toxin works gradually, smoothing and softening lines and wrinkles for up to 4 months. Every face is unique, of course, and we will advise you on how many treatments you are likely to need and how often, depending on the results you'd like to achieve.

How long does Botulinum Toxin work for?

The effects of botulinum toxin often last up to 4 months depending on the patient. If you decide to stop treatment, any permanent lines and wrinkles will gradually return.

Is the treatment painful?

It is very rare for treatment with botulinum toxin to be painful. Most patients experience a feeling of slight discomfort if at all during the treatment itself but that's all. Rest assured we will talk you through what to expect before your first injection, so you'll be fully prepared prior to treatment.

I'm worried that I'll end up with a no expressions

Rest assured following an extensive assessment we will aim to meet your expectations being mindful not to completely remove expression if you wish.

Can I go back to work after the procedure?

With botulinum toxin injections at worst you will have a little redness which will subside after a few hours. If you also have Dermal Filler injections of the mouth area or nose to mouth area you may experience temporary mild bruising and swelling so you may decide not to return to work that day

Why choose us for Botox?

We use Dysport® which we believe gives the best possible results and is the best product on the market. As we are dentists, the treatment will be done in clean and hygienic conditions and with sterile equipment. We are also committed to having the best up to date training and as always are insured for your piece of mind.
